

White Rose Home Learning Link

Many of you are doing an absolutely brilliant job of keeping up your maths practise but what can you do when you have completed the maths activities I put on the class page each week and also you weekly 10 Minute Maths Test?

Try following this link to access White Rose home learning:

<https://whiterosemaths.com/homelearning/year-6/>

Every week, they upload five new lessons to help with a Year 6 topic.

For each lesson, there is a short film to give you the knowledge you need then there is a short activity for you to either print or just answer on a piece of paper (I usually do that to save on printer ink!).

Then you can check your own answers and there are usually notes and annotations to show you how they arrived at the answers.

This is what you have access to so far:

Week 1 of School Closure: Ratio

Fabulous revision of one of the last maths topics we studied. Starts nice and easy if you need a recap then goes on to explain scale factors from lesson 5, which would've been our next topic.

Week 2 of School Closure:

There's a bit more about scale factors then the lessons move on to cover measuring angles.

Week 1 of Summer 1: All about angles

Angles will be our next maths topic when the schools re-open so have a sneaky practise at home to get ahead of the game!
